

ZOP-OOP1-JAVA-WEEK-01.yourturn1

1. Right click on the yourturn1 package (folder) and select New Java Class
2. Now, type HelloWorld in the class name field. Notice that there is no space between Hello and World and that the H and W are capitals.
3. Excellent! Now, type the following code between the { }'s

```
5 public class HelloWorld
6 {
7     public static void main (String[] args)
8     {
9         System.out.println("Hello World!!!");
10    }
11 }
```

Once you've finished typing the code, place your cursor inside of the code window, right click, and select Run Java or, just click on the Run link that has appeared above the public static void:

Run | Debug
`public static void main(String[] args)`

Did you see the words Hello World print out in the output window???

If so, Congratulations!!!! You are now a java programmer!!!

If not, what went wrong? Don't be afraid to ask your neighbour or the prof!
(Hint, red squiggly lines means you've typed something wrong)
